

Identity and Access Management as a Service – Simple like IDaaS, flexible like on-premise

iam-excellence.com

Strategic Challenges & Requirements

Time-to-Market

Implement the right instances for each market – quickly and easily.

- Kick-down start
- Ready-to-use production environment
- Verified and quality-assured standard configuration
- Fully automated and integrated DEV-Environment – Build, Test, Deploy updates in every stage with zero downtime

International Roll-Outs

Market-specific requirements require different instances – implemented quick and easy.

- Setup of separate instances
- Support for market-specific custom extensions
- Support for intelligent global routing of customer data

Mergers & Acquisitions

Integrate new companies and outsource spinoffs without impacting your core business.

- Configuration and infrastructure as code
- Duplication of instances
- Easy-to-replicate data and processes

New Business Models

Test and implement quickly, and handle failures efficiently, without affecting the entire company.

- Setup of separate instances
- Kick-down start
- Ready-to-use production environment
- PoC environments within minutes

Cost Savings

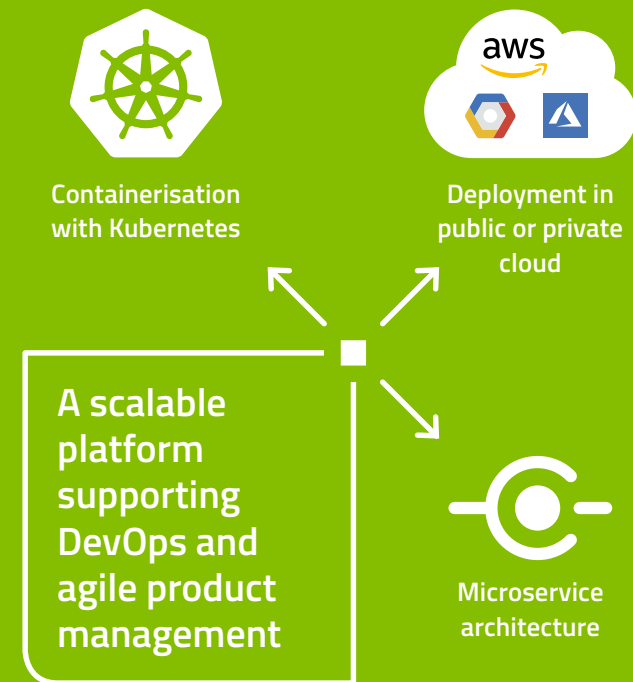

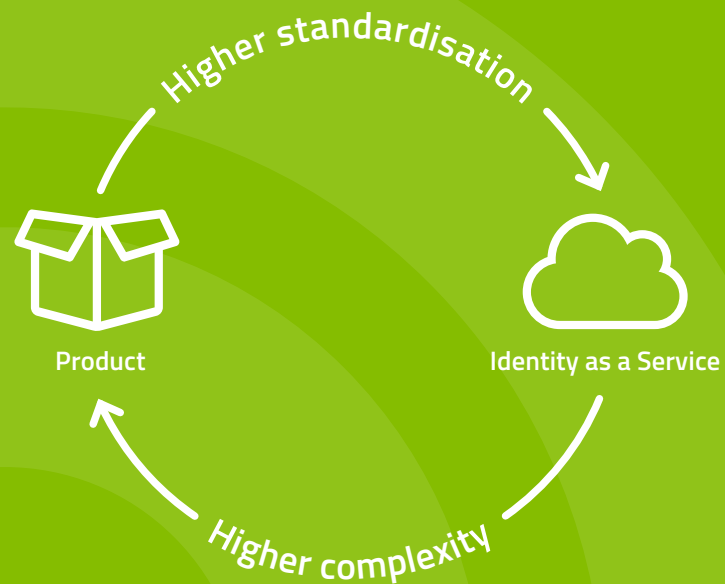

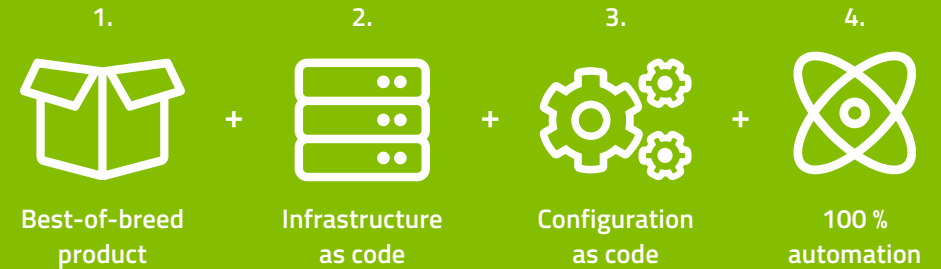

Efficiency and agility are key to business success.

- High standardisation and automation
- Reduced risk compared to own build solutions
- Benefit from added functionality

Our Solutions

Best of both Worlds: Your Product as a Service

Service Layers is a scalable, managed identity & access management platform. It is based on market-leading products and includes infrastructure and operational processes. The microservice and container-based approach is customised to customer-specific conditions and covers companies of all sizes. Service Layers supports public, private or hybrid cloud. Data and configuration can be easily migrated – giving you the flexibility to change your setup at any time.
